

BESPOKE GARDEN DESIGN

Dunn Landscapes is a unique garden design and build service based in Belfast. Each project is tailored to suit individual needs, providing practical schemes with maintenance and long-term cost in mind. We have a dedicated designer with a degree in landscape and garden design allowing each client to get the most out of their outdoor space. The great advantage of having an in-house designer is the ability for communication between the design- and build-team from the initial concept. This ensures that the project can be realised technically on time and on budget. We specialise in 3d garden design which is integral throughout the whole design process and not just for the benefit of presentation through the ability to produce 3d drawings which also enables the client to gain a true perspective of any proposals and fully engage with the design.

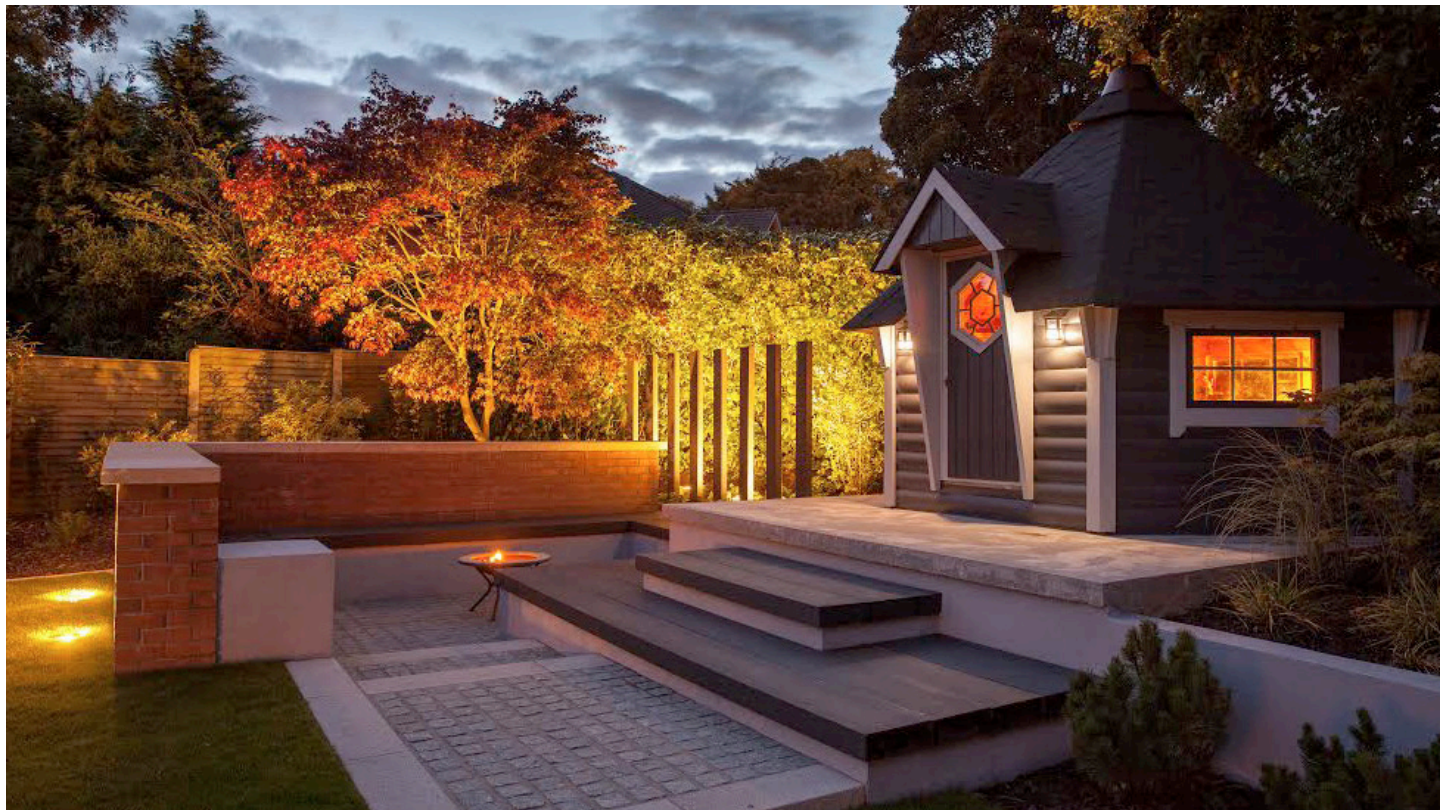

When constructing each garden we pride ourselves on providing the highest quality construction at an acceptable cost with the least possible disruption. All aspects of landscape construction – including earthworks, drainage, detailed brickwork, natural stone paving, joinery works and lighting design – are undertaken by our team.

Peter Dunn heads up the team where he utilises his vast experience and knowledge involved in each project from the first initial site visit to the finishing touches. Peter returned home after studying and then running prestigious

landscaping build projects in London for some of the most illustrious landscape contractors.
